EDUCATION

- **Galgotias University** Greater Noida, India
Bachelor of Technology - Computer Science and Engineering; CGPA: 8.58 *July 2019 - June 2023*

SKILLS SUMMARY

- **Languages:** Java, VBScript, SQL, Python, C
- **Frameworks:** Selenium, Cucumber (BDD), TestNG, Page Object Model (POM), Data Driven Framework
- **AI:** LLMs, Generative AI, Prompt Engineering, AI-assisted Test Automation
- **Tools:** UFT, Maven, ALM, Git, Maven, Jenkins, HP ALM, Test Case Design, Defect Tracking
- **Platforms:** Windows
- **Skills:** Manual Testing, Regression Testing, Leadership, Collaboration, Analytical Problem Solving

WORK EXPERIENCE

- **Cognizant** Bangalore, Karnataka
Automation Engineer (Full-time) *December 2023 - present*
Tech Stack: Selenium, Cucumber, TestNG, WebDriver, Self-healing locators, Apache POI, Automation Testing, Selenium
 - Designed and developed **Selenium WebDriver automation scripts using Java** for ServiceNow modules including Project Management, Demand Management, Resource Management, Portfolio Management, and AER enhancements.
 - Implemented a **hybrid automation framework** using **Page Object Model (POM)** and **data-driven testing** to improve reusability and maintainability.
 - Utilized **Apache POI** to manage Excel-based test data for large-scale regression execution.
 - Developed **BDD scenarios using Cucumber and Gherkin syntax** to validate end-to-end business workflows.
 - Integrated automated test suites with **Jenkins CI/CD pipelines** for scheduled and trigger-based execution.
 - Reduced regression execution time from **200+ hours to under 4 hours**, saving **195+ hours** per cycle.
 - Automated and maintained **300+ regression test cases**, improving coverage and release stability.
 - Integrated automation results with **HP ALM** for centralized reporting and defect tracking.

INTERNSHIP

- **Cognizant** Bangalore, Karnataka
Automation Engineer Intern (Full-time) *Sep 2023 - Nov 2023*
 - **Task:** Learn Automation Testing using Java and Selenium.
 - **Project:** 1C Application
 - **Project Phases:** Project was divided in 6 Phases.
 - * Phase 1 : Manual testing, test case and scenario design, and defect tracking.
 - * Phase 2 : Core Java, Maven, Selenium, and WebDriver scripting.
 - * Phase 3 : TestNG, Page Object Model (POM), and Apache POI.
 - * Phase 4 : Cucumber BDD framework implementation.
 - * Phase 5 : CI/CD integration using Jenkins
 - * Phase 6 : Version control with Git and GitHub.
- **Unstop** Remote
Software Development Intern (Full-time) *May 2021 - July 2021*
 - **Content Writing:** Wrote Technical Articles on web browser, and some modules in Python.
 - **Automation Bot:** Developed a Twitter Automation Bot to post Author's Article on Twitter with some Trending Tags
Co-Developed Facebook Automation program to post links on Facebook groups automatically.
Co-Developed Certificate Maker Project that helped admin to generate Intern's Certificate Automatically.
 - **Impact:** Visitors Count increased by 200 %.
Revenue Increased by 300 %.

HONORS AND AWARDS

- Solved 400+ Coding Problems on GFG
- Secured Elite with Silver Medal in "Core Java" by NPTEL
